AIM: MFA for an IAM user

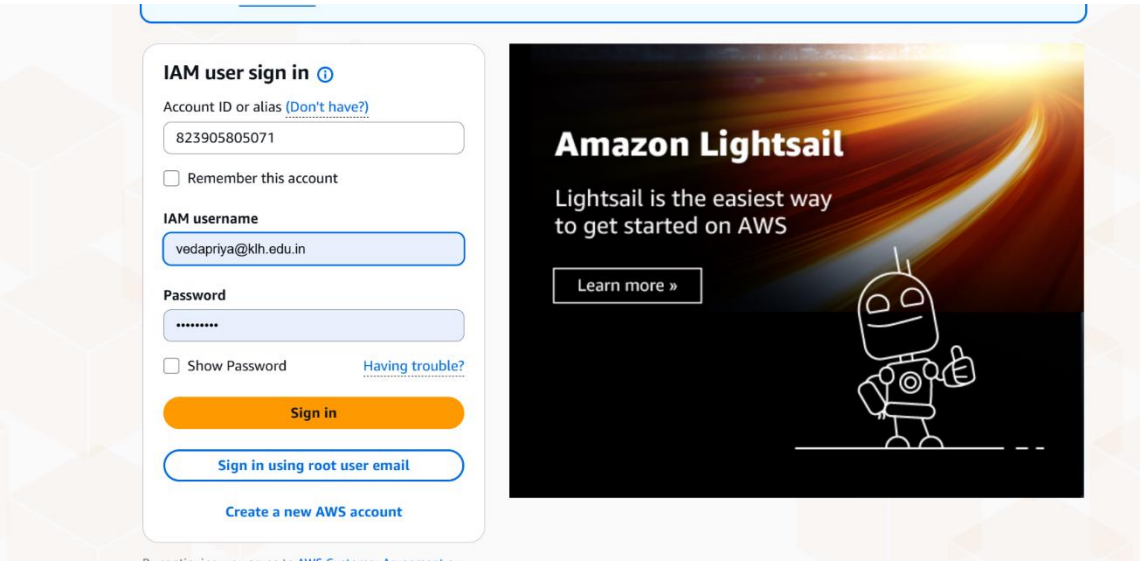

Description:

Enabled Multi-Factor Authentication (MFA) for the AWS IAM User to enhance account security by requiring an additional verification code during login, protecting the account from unauthorized access.

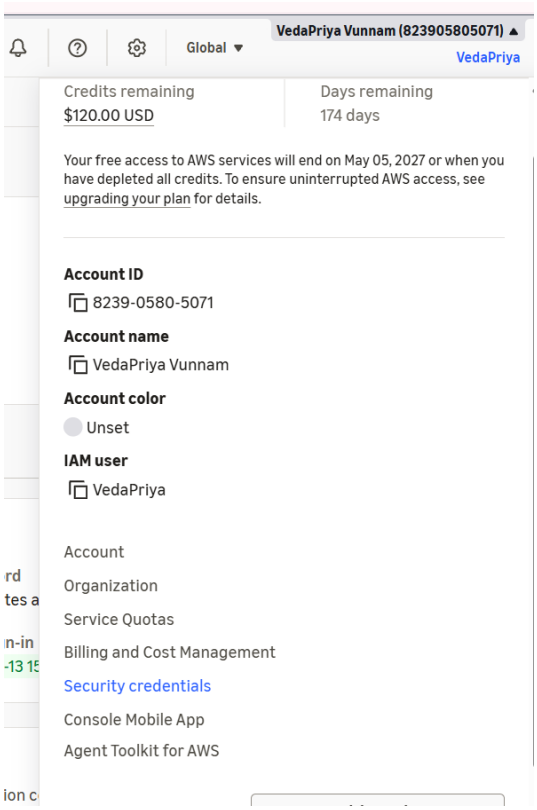

Steps:

Part 2: MFA for an IAM user

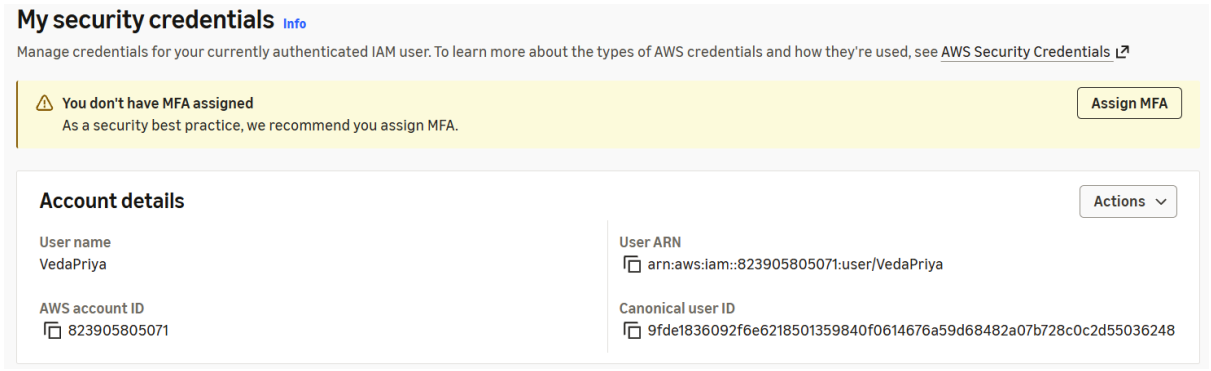

1. Open the IAM service in the console.

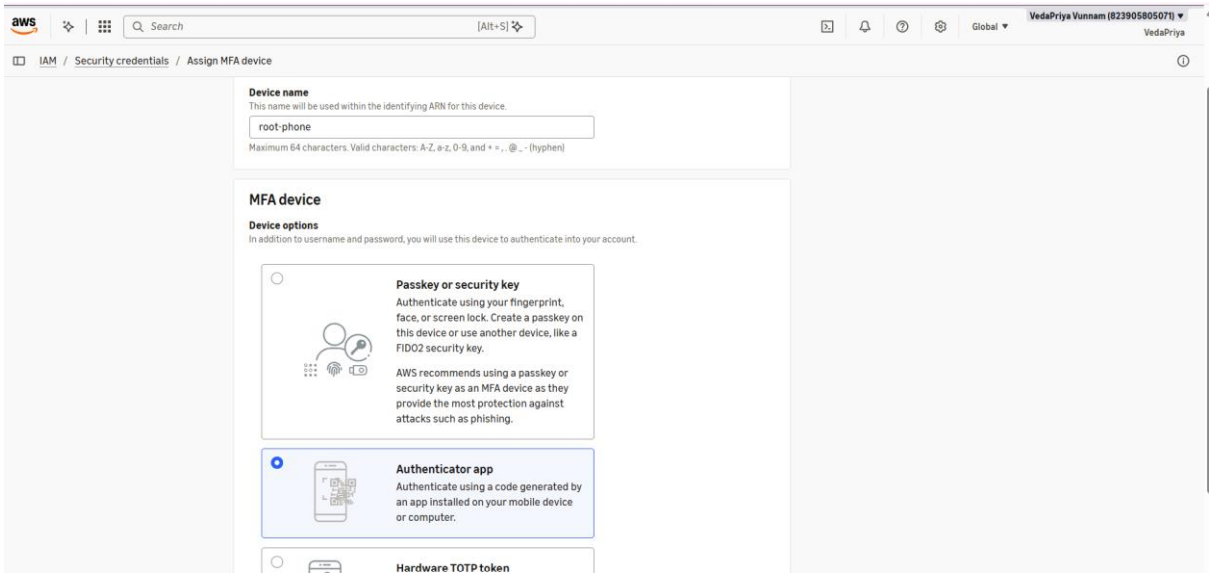

2. Click Users → select the user.
3. Open the Security credentials tab.

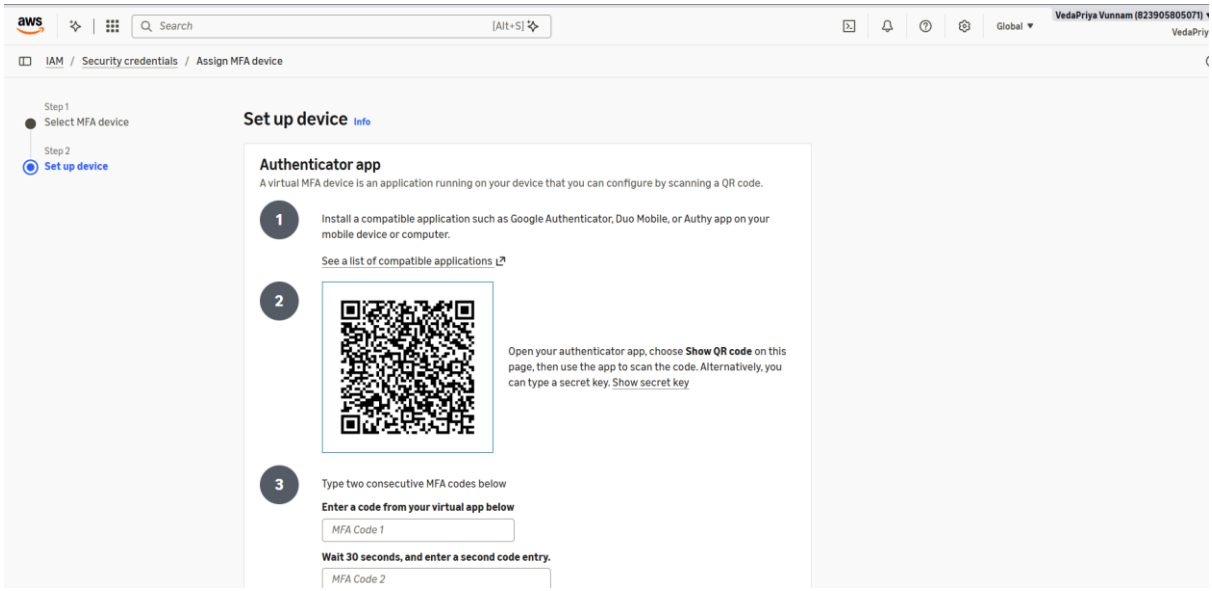

4. Under Multi-factor authentication (MFA), click Assign MFA device.

5. Give it a name, choose Authenticator app, and click Next.

6. Scan the QR code, enter two consecutive codes as above, and click Add MFA. IAM users can also add their own MFA by signing in and going to their account name → Security credentials.

Authenticator app

A virtual MFA device is an application running on your device that you can configure by scanning a QR code.

1. Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.

   See a list of compatible applications

2. Open your authenticator app, choose **Show QR code** on this page, then use the app to scan the code. Alternatively, you can type a secret key. Show secret key

3. Type two consecutive MFA codes below

   Enter a code from your virtual app below

   483136

Part 3: Test it

1. Sign out.
2. Sign in again.
3. After your password, enter the 6-digit code from the app.
