Experiment -2.1

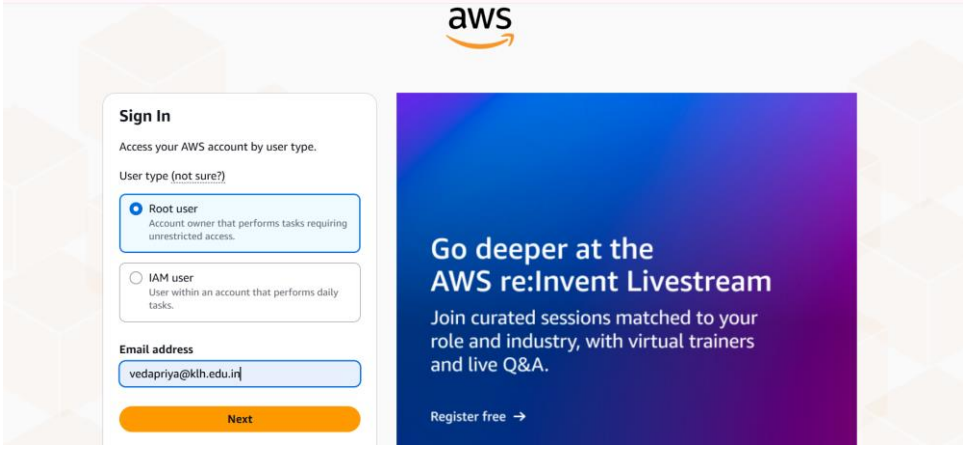

AIM: To enable MFA on a new AWS root account

Description:

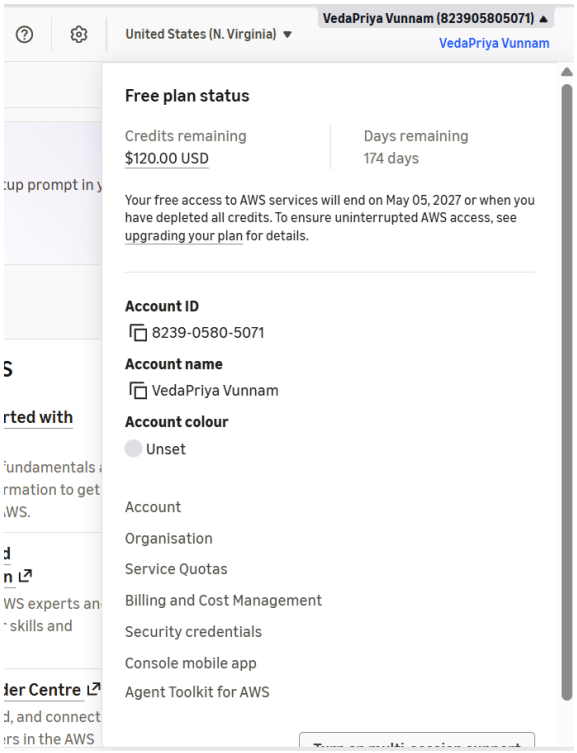

Enabled Multi-Factor Authentication (MFA) for the AWS Root User to enhance account security by requiring an additional verification code during login, protecting the account from unauthorized access.

Steps:

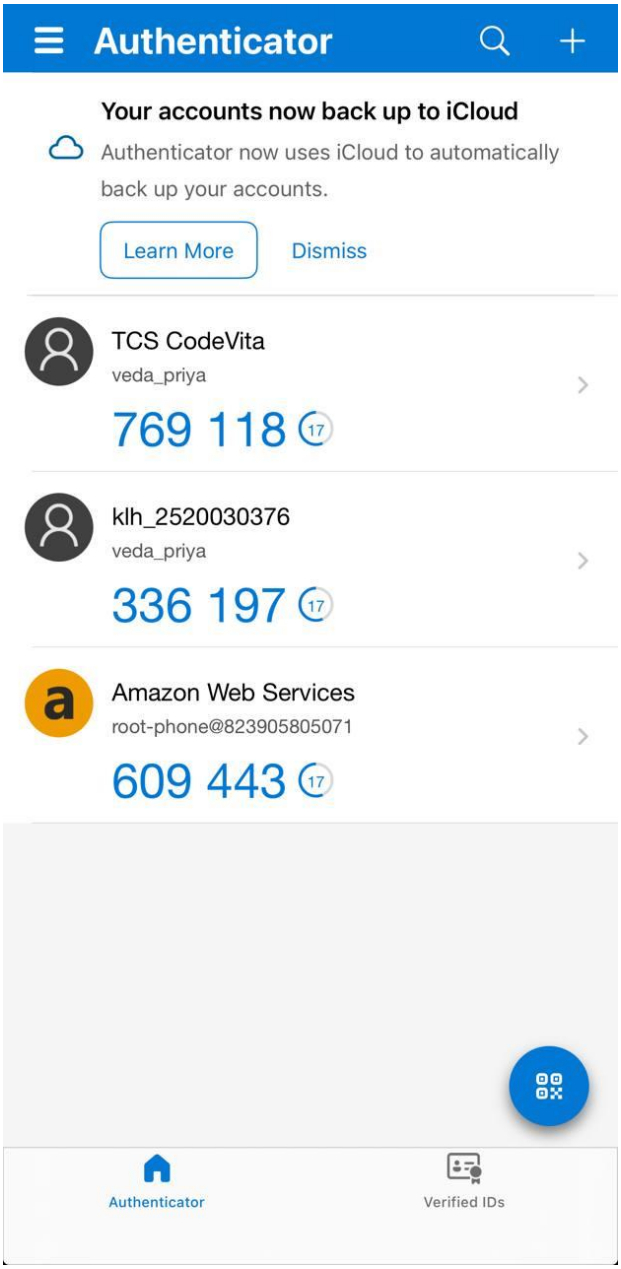

1. Sign in to the AWS Console as the root user (your account email and password).

2. Click your account name (top right) → Security credentials.

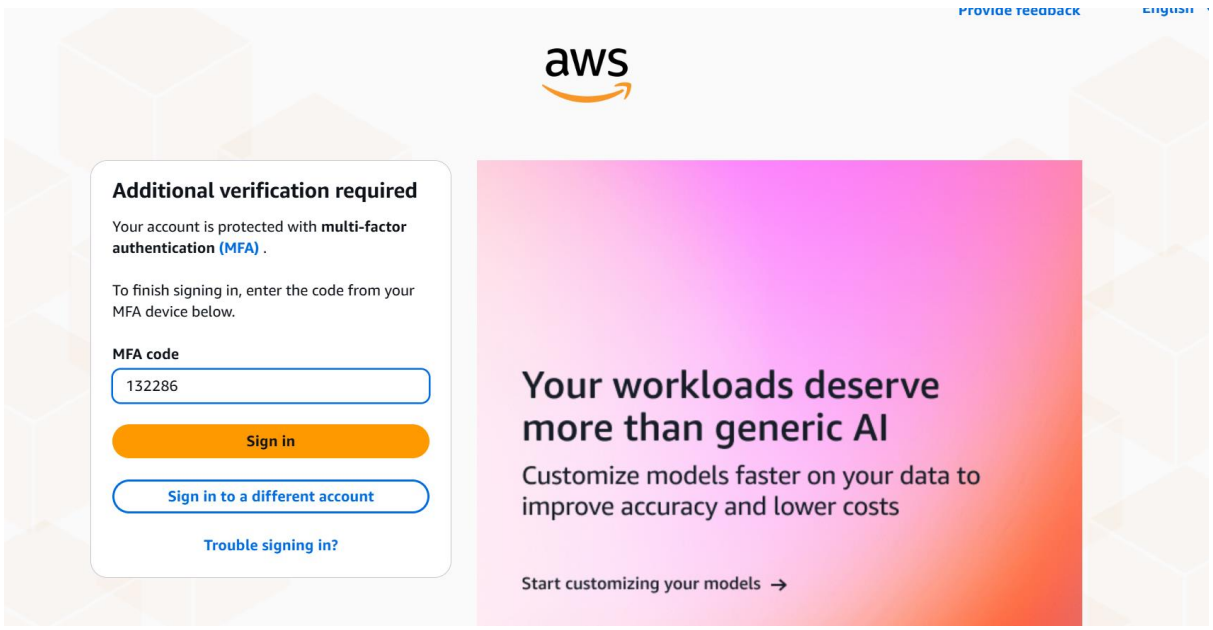

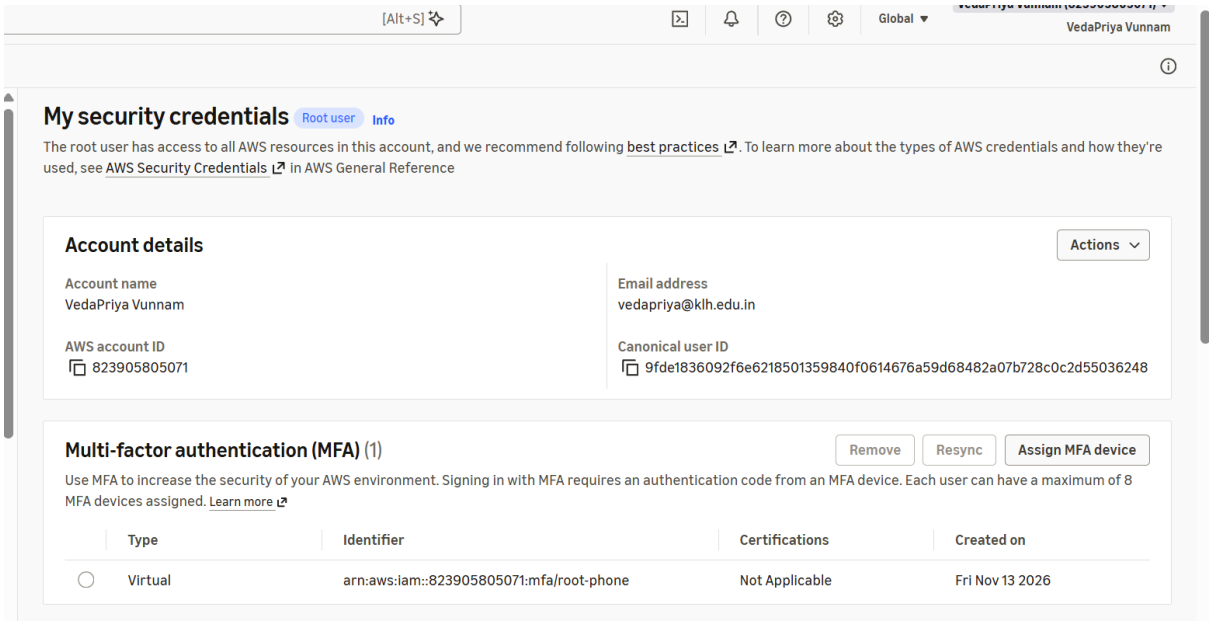

3. Find Multi-factor authentication (MFA) → click Assign MFA device.
4. Enter a Device name, for example root-phone.
5. Select Authenticator app → click Next.
6. Click Show QR code.
7. On your phone, open the authenticator app → Add account → Scan QR code → scan the code on the screen.
8. The app now shows a 6-digit code that changes every 30 seconds. In AWS, type MFA code 1 with the current code.
9. Wait for the code to change (about 30 seconds), then type the new code in MFA code 2.

10. Click Add MFA.

Output:

Provide feedback
English
aws
Additional verification required
Your account is protected with multi-factor authentication (MFA) .
To finish signing in, enter the code from your MFA device below.
MFA code

Assign MFA device
Use MFA to increase the security of your AWS environment. Signing in with MFA requires an authentication code from an MFA device. Each user can have a maximum of 8 MFA devices assigned. Learn more
